

GROGREEN TRAY SUBSTRATE

GROGREEN Tray substrates are composed of high quality pure sphagnum peat. The raw materials are harvested using state of the art methods to preserve the structure of the peat. After harvesting, the peat is carefully screened into different fractions. The GROGREEN TRAY SUBSTRATES contain black frozen through peat and white peat. The end product allows proper filling of the plugs and assures an optimum balance between water retention, soil aeration and drainage. It is the best insurance for sturdy top growth and strong root systems.

GROGREEN TRAY SUBSTRATE'S KEY ADVANTAGES

• CONVENIENCE GROGREEN TRAY SUBSTRATE

is a complete growing substrate ready to be used without other necessary additives.

• BALANCED FERTILISATION

A complete mineral fertilizer containing all macro and micronutrients assures initial seedling development. Iron is added in EDTA form guaranteeing optimal uptake.

• OPTIMUM pH

pH correction to the 5.5-6 level, assures optimal root conditions and nutrient availability.

- **ROOT DEVELOPMENT** High quality white peat and black frozen through peat create the optimal environment for root development: water and oxygen availability.

• HANDLING

The substrate structure allows proper and complete filling of the tray plugs.
